

**FIREGATOR**<sup>™</sup>  
AUTOMATIC FIRE SUPPRESSION SYSTEM

The clear choice in Automatic Fire Suppression for engine enclosures to save your equipment from loss and protect yourself.

## Low Cost

FireGator<sup>™</sup> offers affordability and low maintenance to protect your livelihood, your investment, and yourself in the case of a fire. The entire system is compact and installation friendly for all types of heavy equipment. It is designed to last for over 10 years to protect your equipment for many years to come. Installation and inspections are simple and can be done yourself to insure that your system will deploy in the event of a fire.

## Reduce Your Insurance Premiums

Insurance companies base your premiums on risk. Since FireGator<sup>™</sup> protects your equipment from fire, which is a very common reason for loss of equipment, most insurance carriers discount your premiums based on the decreased risk. Depending on your insurance carrier, over the lifetime of your FireGator<sup>™</sup> system, you could end up saving more in lowered premiums than the system costs you up front. Between reduced premiums and peace of mind by protecting yourself, employees, and your investment, putting a FireGator<sup>™</sup> system on your equipment just makes sense.

## Tested & Approved

FireGator™ is powered by generators that protect some of the most valuable assets in the world, like the Space Shuttle Transport vehicles. The generators are rugged enough to protect US military vehicles in Afghanistan and Iraq, and they are versatile enough to protect remotely located Wind Turbines. More than 100,000 devices powered by these generators were shipped last year alone to protect assets all around the world.

The system is environmentally friendly featuring Zero Global Warming Potential (GWP), no Ozone Depletion Potential (ODP), and is safe for occupied or unoccupied spaces. The systems are UL 2775 Listed featuring a generator that is rugged, sealed, and stainless steel to maximize the longevity of effectiveness.

## Protect Your Investment & Yourself

Because there are numerous sources of fuel and ignition on heavy equipment, fire is a serious threat of loss to your investment. Most equipment fires begin in the engine compartment. From wear and vibration, wires can become compromised causing an electrical short. Another potential threat, especially for logging equipment, is debris making its way into the engine compartment. That is why it's so important to keep your equipment clean and free of debris. In any case, FireGator™ can extinguish all types of fires that begin in the engine compartment and not cause further damage to your equipment.
